Tips for intermediate evaluation

This document presents a suggestion of a structure for the presentation of the intermediate evaluation. There's a maximum of 5 slides, one for each theme.

The structure suggested is the following:

- Introduction (Give an overview of your solution very briefly)

- Modeling (What model did you use and why? Did you do any preprocessing? What were the results?)

- Solution implementation (How would you implement this solution and with which technology(ies)?)

- How will the stakeholders use the model? (Propose a solution for a dashboard or visualization that is intuitive to use for the end-user. Feel free to show a wireframe, PoC, etc.)

- Innovation (Discuss why your solution is innovative)

Data Quality slide:

- In order to qualify for the Data Quality award you must submit a slide with two questions and your answer to them.

  - What external (not provided by APD) resources were used and why are they relevant?

  - What can be done to improve the data provided by the city?

- You can only do one slide in a powerpoint for this award. For that, delete the green text in the available template and write your answers to the questions. And please limit your text to 100 words per answer for each question.
